PLAINTIFFS' DISCOVERY BROCHURE

PLAINTIFF: REDACTED

OCCUPATION: Plant Worker/Machine Operator

EMPLOYER: MLX Corp./McLouth Steel Products

WORK PLACE: McLouth Steel, Gibraltar, MI
(Exposure through Father),
McLouth Steel, Trenton, MI

PERIOD WORKED: 1968-1985
Plaintiff suffered exposure to airborne asbestos fibers from childhood (1956-1968)

JOB CONDITIONS: Open and enclosed, inside areas

NATURE OF EXPOSURE TO ASBESTOS: Continuous involvement in the construction, renovation, alteration, maintenance and repair of Large Heat Treat Furnaces, Steam Lines, Piping and other equipment at McLouth Steel resulting exposure to airborne asbestos fiber occurred from (1) the handling and use of asbestos containing insulation and building materials; (2) working in cooperation with and in close proximity to co-workers and/or other tradesmen such as Bricklayers, Laborers, Asbestos Insulators, Boilermakers, Pipefitters and Carpenters involved in the handling, mixing, fabrication and application of asbestos containing insulation, refractories, castables and building materials consisting of pipecovering, block, cements, textiles, gasketing material, sheet asbestos, firebrick and insulating castables; (3) disturbance, deterioration and friability of asbestos products previously installed; (4) shipping, handling and storage of asbestos

RE:
DOB:
Social Security Number: REDACTED

Dear Mr. Serling:

was seen in my office on February 22, 2002 for evaluation of asbestos exposure..

History of Chief Complaints:

This 51-year-old white male reports that he took a medical retirement from McLouth Steel in 1985. Prior to that, he worked there for 17-years as a general laborer and scale operator. He worked around blast furnaces and around pits under machinery. Asbestos exposure came from airborne flaking from overhead pipes and from brake shoes.

Past Medical and Surgical History:

Some form of valve surgery was performed in 1968, as well as an aortic valve replacement in 1984. Currently, he takes Coumadin.

Family History:

The patient was born in Michigan. He is married and has four living children in good health. One sister is living and in good health. Both parents are living; his mother with lupus and his father in good health.

REDACTED

February 22, 2002
Page 2

Social History:

He indicates that he never smoked. There has been minimal alcoholic intake. At the present time, he works full-time for Kelly Services.

Review of Systems:

HEENT: No rhinitis or sinusitis.

Pulmonary: Patient admits to prior abnormal chest x-rays showing possible asbestosis. His chief pulmonary complaint is shortness of breath.

Cardiac: No chest pain.

GI: No current weight loss. No melena.

GU: No hematuria or dysuria.

Physical Examination:

Weight: 226-lbs. Height: 5'8". Blood pressure: 135/80. Respiratory rate: 18/min.

Pulse: 70/min.

HEENT exam shows good dentition. EOM's are intact. Pharynx is non-injected. Neck is supple. There are no nodes.

Chest shows slightly decreased breath sounds bilaterally.

Heart is in normal sinus rhythm. Aortic valve clicking sound noted. There are no murmurs.

Abdomen is soft and supple. Liver, spleen and kidneys are not felt. There is no guarding or rebound. Bowel sounds are present in all quadrants.

Skin shows no rashes or lesions.

Extremities show no edema, clubbing, phlebitis or cyanosis.

Neurological exam shows that all cranial nerves are intact. Affect is normal. Gross motor and sensory testing is within normal limits.

Oxygen Saturation:

Resting pulse oxygen is 96%.

REDACTED

February 22, 2002
Page 3

Electrocardiogram:

Resting EKG is interpreted as being within normal limits.

Pulmonary Function Tests:

These tests show decreased lung volumes and decreased diffusion capacity.

Chest X-ray:

Chest x-ray shows median sternotomy sutures with probable aortic valve replacement. There are slight increased interstitial markings at the right base.

Diagnoses:

The following diagnoses apply in this case:

1. Asbestosis.
2. Status post aortic valve replacement.

Discussion:

The patient's history, physical examination, chest x-ray and pulmonary function tests are consistent with a diagnosis of asbestosis with mild physiologic impairment. The patient should be watched for certain thoracic and extra-thoracic malignancies associated with workers who have had exposure to asbestos.

Please do not hesitate to call me at my office, if you have any questions regarding this patient.

Sincerely,

Jeffrey F. Parker, M.D.
Diplomate, American Board of
Internal Medicine and Pulmonary Diseases

RE: REDACTED
DOB:
Social Security Number:

Dear Mr. Serling:

He was seen in my office on February 22, 2002 for evaluation of asbestos exposure.

History of Chief Complaints:

This 51-year-old white male reports that he took a medical retirement from McLouth Steel in 1985. Prior to that, he worked there for 17-years as a general laborer and scale operator. He worked around blast furnaces and around pits under machinery. Asbestos exposure came from airborne flaking from overhead pipes and from brake shoes.

Past Medical and Surgical History:

Some form of valve surgery was performed in 1968, as well as an aortic valve replacement in 1984. Currently, he takes Coumadin.

Family History:

The patient was born in Michigan. He is married and has four living children in good health. One sister is living and in good health. Both parents are living; his mother with lupus and his father in good health.

REDACTED

REDACTED

Page 2

Social History:

He indicates that he never smoked. There has been minimal alcoholic intake. At the present time, he works full-time for Kelly Services.

Review of Systems:

HEENT: No rhinitis or sinusitis.

Pulmonary: Patient admits to prior abnormal chest x-rays showing possible asbestosis. His chief pulmonary complaint is shortness of breath.

Cardiac: No chest pain.

GI: No current weight loss. No melena.

GU: No hematuria or dysuria.

Physical Examination:

Weight: 226-lbs. Height: 5'8". Blood pressure: 135/80. Respiratory rate: 18/min.
Pulse: 70/min.

HEENT exam shows good dentition. EOM's are intact. Pharynx is non-injected. Neck is supple. There are no nodes.

Chest shows slightly decreased breath sounds bilaterally.

Heart is in normal sinus rhythm. Aortic valve clicking sound noted. There are no murmurs.

Abdomen is soft and supple. Liver, spleen and kidneys are not felt. There is no guarding or rebound. Bowel sounds are present in all quadrants.

Skin shows no rashes or lesions.

Extremities show no edema, clubbing, phlebitis or cyanosis.

Neurological exam shows that all cranial nerves are intact. Affect is normal. Gross motor and sensory testing is within normal limits.

Oxygen Saturation:

Resting pulse oxygen is 96%.

REDACTED

February 22, 2002
Page 3

Electrocardiogram:

Resting EKG is interpreted as being within normal limits.

Pulmonary Function Tests:

These tests show decreased lung volumes and decreased diffusion capacity.

Chest X-ray:

Chest x-ray shows median sternotomy sutures with probable aortic valve replacement. There are slight increased interstitial markings at the right base.

Diagnoses:

The following diagnoses apply in this case:

1. Asbestosis.
2. Status post aortic valve replacement.

Discussion:

The patient's history, physical examination, chest x-ray and pulmonary function tests are consistent with a diagnosis of asbestosis with mild physiologic impairment. The patient should be watched for certain thoracic and extra-thoracic malignancies associated with workers who have had exposure to asbestos.

Please do not hesitate to call me at my office, if you have any questions regarding this patient.

Sincerely,

Jeffrey F. Parker, M.D.

Re: Michael B. Serling, P.C. W.R. Grace Claimants

Dear Rust Consulting,

Enclosed for your review please find four boxes of claims for W.R. Grace submitted from the Law Offices of Michael B. Serling, P.C. Boxes 1 and 2 contain completed W.R. Grace personal injury questionnaires. Boxes 3 and 4 are clients that did not receive questionnaires for what we believe will qualify as pre-petition W.R. Grace claims.

Enclosed in box 1 please find two lists. List A contains the clients that have completed questionnaires. List B contains the clients we believe will qualify as pre-petition claims. If you need any additional information, please do not hesitate to contact me.

Sincerely,

Joel A. Waterstone

Please fold this document in half and place it in the waybill pouch affixed to your shipment so that the barcode portion of the label can be read and scanned.

***WARNING: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

1. Fold the printed page along the horizontal line.
 2. Place label in shipping label pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.
- Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$500, e.g. Jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.
